Goto. Set History. See History. A summary of your activity on Power BI and other Microsoft products is available in the activity center. These cells will have the cell link copied in to them. These cells will then be available in the Power BI Desktop. If you try to change the headers in an Excel spreadsheet, you may see this message in the Power BI Report viewer. How can I copy the cell link from the Power BI Mobile Viewer to my workbook? Without copying the cell link, I can't update the cell. Open your Power BI workbook and click the Edit button in the top menu bar. Open the Power BI desktop, and then select File > Copy to Copy the entire link for the cell. How do I change the Excel workbook link to the cell link in Power BI? A cell link will automatically be copied to your workbook from a cell in Excel. On the navigation menu bar on the left, click Cell. On the Edit ribbon toolbar, click Copy.Q: A candidate for a lecture on the history of ancient warfare? I was looking for a course on ancient warfare, in which topics like the sieges of Thebes, the Peloponnesian War, Alexander the Great and Rome would have been covered. What could have been a good candidate? A: This might be a place to start. They go over Classical Greece from a history of warfare perspective, but it is the perspective of the Greeks that you are looking for. The History of Ancient Warfare by Robert Graves (1968) Q: Firebase database having the same names Currently I am developing an app using firebase. It stores some data into a firebase database. My database structure looks like this. So basically every child nodes of app_details has same names as of those in app_type_details. Now I am thinking, what if I don't want to have the same names for my child nodes? How can I achieve this? The reason why I am having the same names is, I'm going to fetch the values from firebase as follows. let values = [{"London": ["london", "shoreditch", "old-london"], "Paris": ["Paris"]} let values1 = [{"London": ["Not London", "shoreditch", "old-london"]} let values2 = [{"Paris": ["Paris"]} Now, I need to do something 82157476af
